

## Digital Cameras and Your Computer

### **WHY TAKE THIS COURSE?**

Do you want to know more about the buttons on your camera? Come to this short leisure course and find out how to take better photographs, save them to your computer, edit and manipulate them and share them with your family and friends.

### **WHAT ARE THE KEY TOPICS IT WILL COVER?**

You will look at the basics of equipment including choosing the best camera for you, resolution and basic camera features. You will also learn how to acquire your digital pictures including moving them from your camera to your computer and making your old photographs digital using a scanner. You will work with image editing software to improve your photos by solving problems such as red eye and correcting colour, brightness and contrast. You will look at how to keep your images safe, know how to put them where you want them in an organised fashion and how to print and share your images via email.

### **WHO WILL THE COURSE SUIT?**

Family photographers, anyone who wants to add to the family album. If you would like to feel more comfortable with your digital camera, to produce pictures that are special and have "personality", this is for you. No previous knowledge or experience is necessary. You must be 19 years old or above to do this course.

### **IS THERE A QUALIFICATION AT THE END OF THE COURSE?**

No. There are no formal assessments but you will each be given an Individual Learning Plan on which you will find key objectives for the course. You will be asked if you have any of your own personal learning objectives and your tutor will try to accommodate these topics if at all possible. We will ask you to review your learning to make sure that everything on the course is meeting your expectations.
